Welcome to Hisar MLMUN'20

ECE DOĞRAMACI, DEPUTY SECRETARY-GENERAL

As the Deputy Secretary-General, it is with utmost pleasure that I welcome you to the first annual session of Modern Languages Model United Nations, a THIMUN-procedure conference held at Hisar Schools on the 9th of February, 2020.

MLMUN is a unique event and the first of its kind. For the first time in the history of MUN conferences organized in Turkey, the conference has three official languages: Spanish, French, and German. MLMUN is organized for high-school students who aspire to gain awareness about global issues while challenging themselves by getting to learn a foreign language.

The theme of MLMUN this year is one we believe is of utmost relevance to current politics: "The Impact of Global Warming in the Global Age". In recent years, global warming has stopped being a solely environmental problem and has gained space as one of the primary issues of political disagreement. With delegates debating resolutions on such a crucial topic, MLMUN hopes to create an environment where a compromise between all Member States will be achieved. With the cost of discrepancy on the issue of global warming looming in the near future, it is with extreme emphasis that we encourage all guests to take advantage of such an environment by means of communication and collaboration. With the situation at hand, building strong relationships has become one of the most important steps to solving a global conflict.

As the MLMUN organizing team, we hope that this conference will result in fruitful debates and provide you with a broader perspective. While taking part in one of the most unique MUN conferences in the world, please be acquainted with delegates speaking different languages and do your best to build your relationships with a diverse range of people for a better future.

Qu'arrive-t-il à notre monde?/ What is happening to our world?

DEFNE KEÇECİ

Comme vous le savez tous, le réchauffement climatique est un gros problème dans le monde d'aujourd'hui. Surtout ces derniers mois, c'est un sujet majeur dans l'actualité. Selon de nombreuses sources le niveau de dioxyde de carbone dans l'air, température globale, et le niveau de la mer a augmenté, minimums de glaces arctiques et les calottes glaciaires ont diminué progressivement. Effets que les scientifiques avaient prévus il y a des années qui résulteraient du changement climatique mondial se produisent maintenant et nous devons commencer à prendre des mesures même si certains d'entre nous ne croient pas qu'elle existe réellement. Heureusement, la jeune population fait un pas et en utilisant leurs voix pour sauver notre monde. Certains activistes adolescents sont à l'avant-garde de ce mouvement comme Greta Thunberg. Ils font tout ce qui est en leur pouvoir pour faire de ce monde notre maison. Il est maintenant temps de faire attention et de réparer ce que les autres ont cassé.

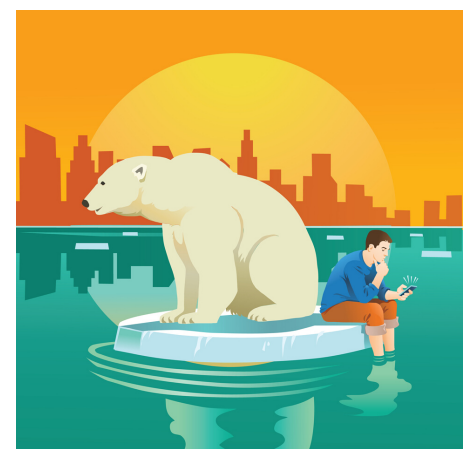

As you all know, global warming is a big problem in today's world. Especially these last few months, it has been a major topic in the news. According to many sources the level of carbon dioxide in the air, global temperature, and sea levels have increased, arctic ice minimums and ice sheets have decreased gradually. Effects that scientists had predicted years ago that would result from global climate change are now occurring and we have to start taking actions even though some of us don't believe it actually exists. Thankfully, the young population is taking a step and using their voices in order to save our world. Some teen activists are at the forefront of this movement like Gretha Thunberg. They are doing everything in their power to make this world our home. Now it's our time to be careful and repair what others broke.

Was wird mit unserer Welt passieren?/ What will happen to our world?

MİNA ŞAKARCAN

Als Menschen können wir es uns nicht leisten, die globale Erwärmung zu leugnen. Wenn wir die globale Erwärmung nicht überwinden, können wir auch Jahre nach Generationen keinen guten Boden hinterlassen. Der Meeresspiegel wird nach 100 Jahren zwischen 3 und 4 Metern ansteigen, da das Eis in der Arktis aufgrund der globalen Erwärmung schmilzt. Es wird geschätzt, dass die Durchschnittstemperatur der Erde bis 2100 um 2,5 Grad steigen wird. In wärmeren Jahreszeiten herrscht 'Killer wärme'. Infolge des Klimawandels werden die Menschen einer Zwangsmigration ausgesetzt sein. Vielen Quellen zufolge wird die Anzahl der extremen Hitzetage um 10 % zunehmen. Wenn wir unsere Welt nicht mit Sorgfalt behandeln, werden wir die Zukunft mit einem leider zerstörten Planeten verlassen.

As human beings, we cannot afford to deny global warming. If we do not overcome global warming, we cannot leave the next generations a good environment. Sea levels will rise between 3 and 4 meters after 100 years as the Arctic ice melts due to global warming. It is estimated that Earth's average temperature will rise 2.5 degrees by 2100. In warmer seasons there will be 'killer warmths'. As a result of climate change, people will face forced migration. According to many sources, the number of extreme heat days will increase by 10%. If we do not treat our world with care, we will leave the future with a unfortunately destroyed planet.

¿Qué puedo hacer como ciudadano para ayudar?/ What can I do as a citizen to help?

DENİZ UNCU

Deberíamos hacer algo para detener el calentamiento y salvar nuestro planeta. Para salvar nuestro planeta, debemos valorar el reciclaje. Podemos usar diferentes contenedores para separar nuestra basura correctamente y también educar a las personas para crear conciencia sobre el proceso de reciclaje. Además del reciclaje, debemos tener cuidado con nuestro uso de electricidad y agua. Además, deberíamos centrarnos en utilizar energía renovable en lugar de combustibles fósiles. Estos combustibles dañan nuestro planeta y aumentan el calor. Acerca de los combustibles fósiles, también podemos usar el transporte público para usar menos combustibles fósiles. Nosotros, como personas, debemos ser conscientes del calentamiento global y actuar de manera responsable.

We should do something to stop climate change and save our planet. To save our planet, we must value recycling. We can use different containers to separate our trash properly and also educate people to raise awareness about the recycling process. In addition to recycling, we must be careful with our use of electricity and water. In addition, we should focus on using renewable energy instead of fossil fuels. These fuels damage our planet and increase heat. About fossil fuels, we can also use public transportation to use less fossil fuels. We, as people, must be aware of global warming and act responsibly.
